*Infonents*  
...CREATING TECHNOLOGY

## Company PROFILE

Infonents was established in the year of 2000 as an offshore development facility. Infonents' top management team consists of expert IT professionals with international experience ranging from 7 to 25 years. Initially focusing on the Offshore Software Developments, Infonents was able to build a strong technical infrastructure. Infonents is currently developing software products to offer affordable E-solutions for the unexplored niches of the Small and Medium Enterprises' business applications worldwide. Infonents has its presence in India, USA and Singapore.

At Infonents, we believe in growth by serving and achieving customer satisfaction and not just by doing more business. Doing the work right the first time, working with the client at every level and being a team player are the strict disciplines maintained among Infonents' employees. At Infonents, we have the flexibility and expertise to plan and work for the customer within the budget and time limitations, while still completing the projects successfully. When it comes to project management, Infonents creates a friendly, professional atmosphere for everybody in the project, demonstrates the technical expertise by helping and guiding not only the workflow but also the client management.

The Infonents team has extensive experience in providing Intelligent Solutions Application Development, Re-engineering and Application porting to new hardware/software platforms for both direct and indirect clients. Infonents' experience encompasses every phase of the software development lifecycle, from conceptualization and requirements gathering to implementation and maintenance of systems.

Infonents' main strengths have been the fact that we are technologically nimble, procedurally sound and highly committed. We believe that in this age of instant information and immediate gratifications, customers do and should expect to see quick results. We, at Infonents, ensure that customers see results as quickly as possible without compromising on procedures, documentations and quality.

## Offshore Development BENEFITS

**Lower costs:** There are tremendous cost savings of nearly 60 per cent in migrating software development to India. American and European organizations opting for offshore development will get English-speaking project leaders, which makes communications seamless.

**Speed:** The 24/7-hour workdays in 3 shifts create a constant and ongoing development platform, shifting workload between different time zones cutting down your development time.

**Quality:** India has one of the best programming talent pools in the world. Indian employees with their strong Mathematics and Engineering background provide the best software talent with higher quality of performance available in the industry.

## Our SERVICES
